

NAUMA-TEC

HI TECH RIBS AND CRAFTS

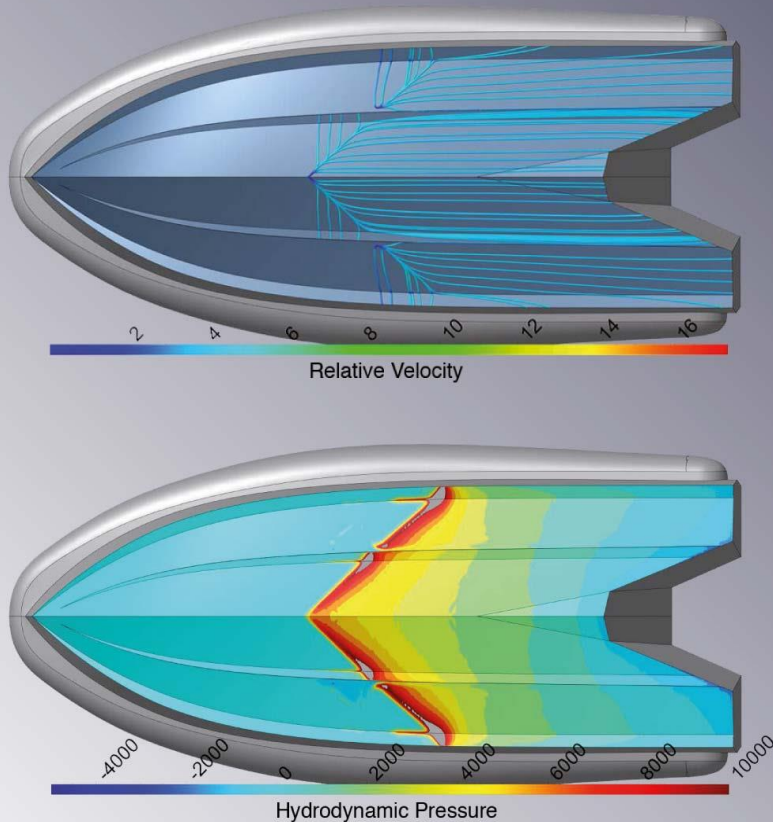

E-TENDER

NAUMATEC is a dynamic Company always ready to meet the market demand and customer needs and therefore always focused in improving its offer and products.

In collaboration with a technical team that has perfected **HURACAN**[®], a brushless marine electric engine, completely water cooled, Naumatec has created **E-TENDER**, its first tender powered by electric engine.

E-TENDER 460

The hull of **E-TENDER** has been specially developed by the designer Federico Fiorentino for this model and this type of propulsion, in order to ensure high performance, low energy absorption (hence greater autonomy) and high maneuverability. A remarkable handling, even in confined spaces and in reverse, is granted by an innovative mobile stern drive, developed by Huracan specifically for Naumatec, with a trim that ensure a very low steering radius.

E-TENDER is built with a special "D" shape hypalon tube, that carries out its natural floating reserve function and also becomes a functional fender, always welcomed by mega yachts.

Thanks to the electrical propulsion, **E-TENDER**

- is at the same time extremely silent and also zero emissions;
- it does not create problems with stowage in mega yachts;
- it requires minimal maintenance and
- it has access to protected marine areas, where it is forbidden to sail with a traditional thermal engine.

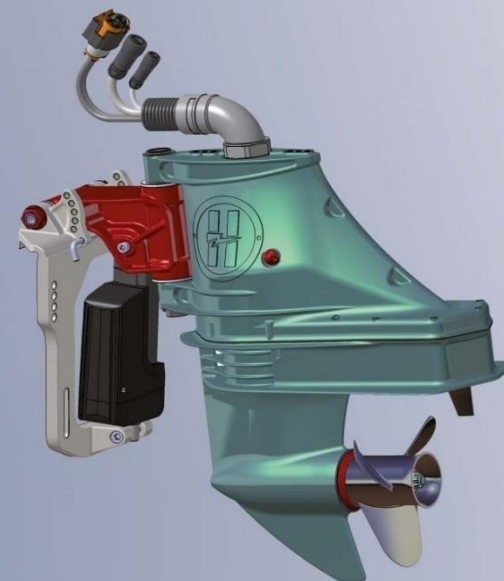

E-TENDER 460

TECHNICAL SPECIFICATIONS

LENGTH	4.66 m - loa 4.81 m
EXT-INT BEAM	2,00-1,43 m
HEIGHT	1.02 m - hoa 1.37
MAX LOAD	6 people
ENGINE	Brushless Electric Engine 30 kW Entirely Water Cooled
TRASMISSION	Stern Drive with custom made Lift or Trim System
BATTERY	Type LiFePO 224V 22,4 kWh
DRY WEIGHT	560 Kg with 30 kW engine and 22,4 kWh battery

ON DEMAND OPTIONS

Possibility to install Photovoltaic Panels
